

Stable Homes Grant — Annual Outcome Report

Stable Homes Grant · Example State Housing Trust Fund

Reporting period: July 01, 2024 – June 30, 2025

Prepared by: Program Data & Evaluation Team

Generated: August 10, 2026 15:41

Narrative mode: Deterministic (non-AI mode)

Program Overview

Annual outcomes grant funding emergency shelter, rapid re-housing, and permanent supportive housing services. Measures focus on permanent housing placement, income growth, and post-exit stability.

Program	Description
Rapid Re-Housing	Short-term rental assistance and housing-focused case management.
Emergency Shelter	Immediate low-barrier shelter with diversion and housing navigation.
Permanent Supportive Housing	Long-term subsidized housing with intensive supportive services.

Executive Summary

During the reporting period (July 2024–June 2025), Stable Homes Grant programs enrolled 260 clients across 260 households (472 individuals). Of 145 exits, 93 (64.1%) were successful and 93 (64.1%) went to permanent housing. Median household income change at exit was \$0, with 46.8% of households increasing income. 5 of 5 performance measures met their targets. Headline: 64.1% of the 145 exits this period were successful, against 5 tracked measures (5 met, 0 missed).

Data Quality Statement

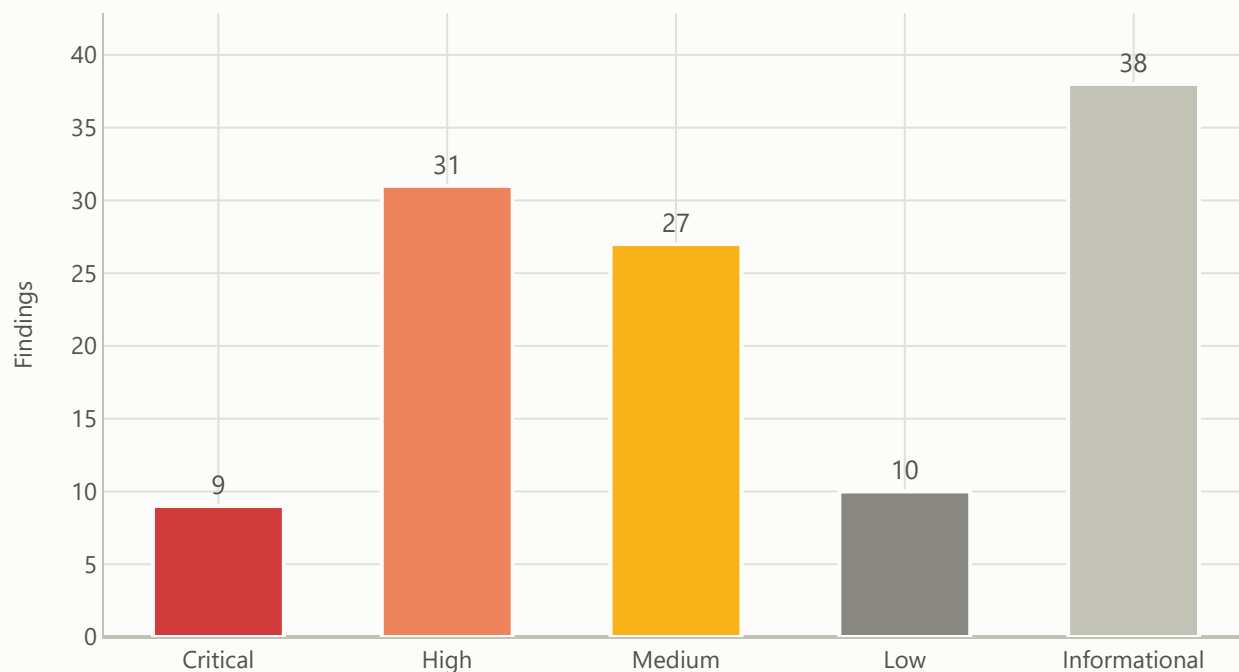

Audited 263 records for Stable Homes Grant: overall data quality score 85.1/100 (grade B). Findings by severity: 9 critical, 31 high, 27 medium, 10 low, 38 informational. 5 blocking issue type(s) must be resolved before submission: Missing required fields, Missing exit destination, Exit before enrollment, Duplicate client enrollment. Largest issues: Duplicate client enrollment (6 records); Exit before enrollment (3 records); Missing required fields (4 records).

85.1 Data quality score (of 100)	B Grade	115 Total findings	5 Blocking issue types
--	-------------------------------	--	--

Blocking issues present. Resolve these before submitting to the funder:

- Missing required fields — 4 record(s)
- Missing exit destination — 3 record(s)
- Exit before enrollment — 3 record(s)
- Duplicate client enrollment — 6 record(s)
- Unknown program — 2 record(s)

Performance Measures

Measure	Target	Actual	Status
Permanent housing exit rate	60.0%	64.1%	Met
Households increasing income at exit	40.0%	46.8%	Met
6-month follow-up completion rate	70.0%	97.2%	Met
Assessment completion rate	90.0%	98.8%	Met
Exit plan completion rate	85.0%	97.9%	Met

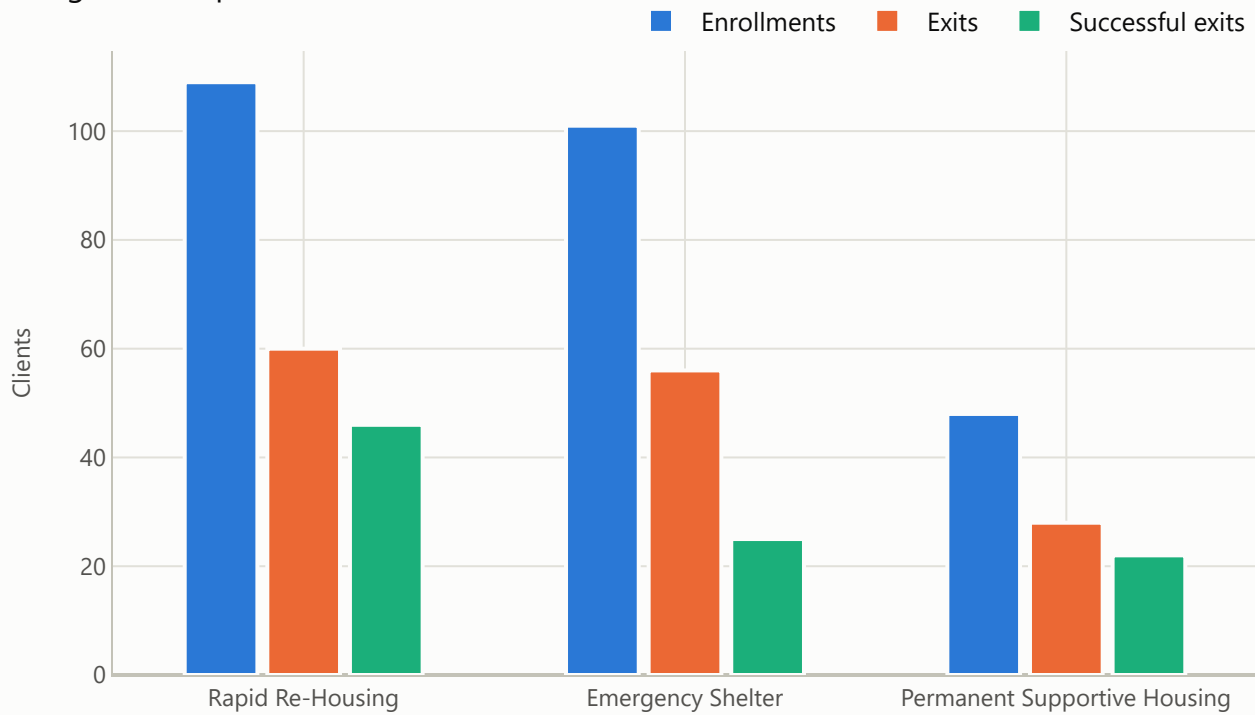

Performance Measures: Goal vs. Actual

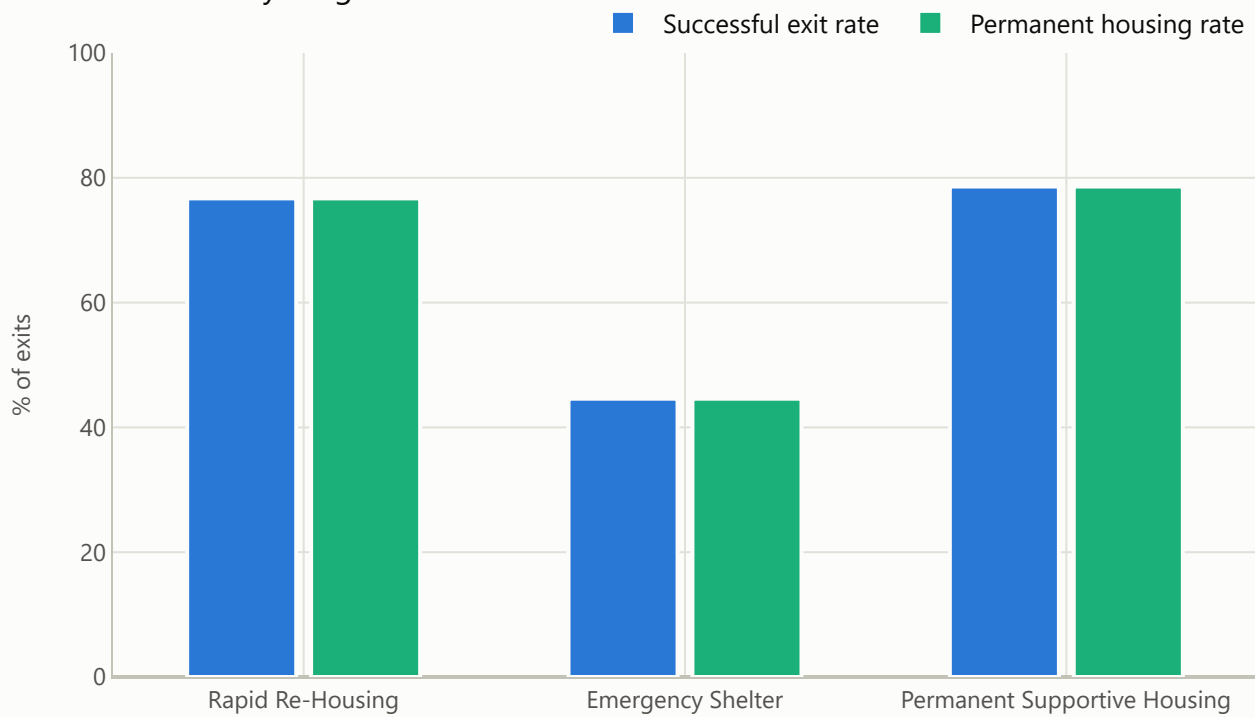

Program Comparison

Program	Enrollments	Active	Exits	Successful exit rate	Permanent housing rate	Avg income change
Rapid Re-Housing	109	49	60	76.7%	76.7%	\$231
Emergency Shelter	101	45	56	44.6%	44.6%	\$225
Permanent Supportive Housing	48	20	28	78.6%	78.6%	\$118

Program Comparison

Outcome Rates by Program

Key Findings

- 260 enrollments across 3 program(s) served 260 households (472 individuals: 327 adults, 164 children).
- 145 clients exited (55.8% of enrollments); 93 were successful exits (64.1%) and 93 went to permanent housing (64.1%).
- Among 139 exits with complete income data, median income change was \$0 and 46.8% of households increased income.
- 5 of 5 performance measures met their targets.
- Enrollments are up 0.0% month-over-month in the most recent month.
- Enrollment peaked in 2025-03 (34) and was lowest in 2024-10 (18).

Challenges & Risks

- Emergency Shelter trails on successful exits (44.6% of 56 exits); review exit planning and destination documentation.
- Overall data quality score is 85.1/100 (grade B) across 263 records.
- Blocking: Missing required fields affects 4 record(s) — Required fields defined by the grant profile are empty. Reports built on incomplete required data may be rejected by the funder.
- Blocking: Missing exit destination affects 3 record(s) — Exited clients have no destination recorded. Housing outcome measures (including permanent housing rate) exclude these exits.
- Blocking: Exit before enrollment affects 3 record(s) — Exit dates fall before the enrollment date, which is impossible and produces negative lengths of stay.
- Blocking: Duplicate client enrollment affects 6 record(s) — The same client ID appears more than once for the same program and enrollment date. Duplicates inflate enrollment counts and distort every rate.
- Blocking: Unknown program affects 2 record(s) — Program labels do not match any program or alias defined in the grant profile. These records cannot be attributed to a funded program.
- 2% of exits have no destination recorded, so the true successful-exit and permanent-housing rates are likely understated.
- 1 cell(s) contain text resembling prompt-injection attempts; they are neutralized before any AI processing.
- 3 duplicate enrollment(s) were excluded from analytics; source data should be deduplicated.
- Emergency Shelter's successful-exit rate (44.6%) is 22 points below the cross-program average (66.6%) — worth explaining before publication.

- Statistical income outlier: Entry incomes are far above the typical range for this dataset (above \$6,800, the 3×IQR fence). They may be legitimate but can pull average income figures upward.
- Enrollment volume anomaly: Some months have enrollment counts more than two standard deviations from the monthly average (21.8). This can indicate missing exports, backlogged data entry, or a real programmatic change worth explaining in the report.

Recommended Actions

- Complete the 12 overdue follow-up(s); follow-up completion is a funder performance measure.
- Fix duplicate client enrollment (6 record(s)): Keep one record per client per enrollment; merge or delete the duplicates.
- Fix exit before enrollment (3 record(s)): Check both dates against case notes and correct whichever was mis-entered.
- Fix missing required fields (4 record(s)): Fill in the missing values from case files or the source system, then re-upload.
- Fix overdue 3-month follow-up (4 record(s)): Contact the flagged clients to complete the 3-month follow-up, and record the completion date.
- Fix overdue 6-month follow-up (4 record(s)): Contact the flagged clients to complete the 6-month follow-up, and record the completion date.

Methodology

All metrics are calculated deterministically from the uploaded data extract using the "housing_stability" grant profile: field mappings translate source columns to a canonical schema; program aliases are normalized; exact duplicate enrollments are removed before analysis; outcome categories and successful-exit definitions come from the profile's exit destination mappings; follow-up due dates are derived from exit dates plus the configured schedule. AI narrative (when enabled) is generated strictly from these pre-calculated metrics and never performs its own arithmetic.

Data Limitations

- 3 duplicate enrollment record(s) were excluded from analytics.
- 3 household(s) had missing or implausible household size and were excluded from individual counts.
- Income change is based on 139 of 145 exits; the rest were missing or had invalid entry/exit income.

- Blocking data quality issues were present at generation time; affected metrics may be understated (see the Data Quality section).
- 3 exit(s) lack a destination and are counted as non-successful, which understates outcome rates.
- All figures are drawn from the uploaded extract and reflect data quality at the time of export; they may change as corrections are made.

Appendix: Measure Definitions

Measure	Definition
Permanent housing exit rate	Exits to a permanent-housing destination as a percentage of all exits.
Households increasing income at exit	Share of exited households whose exit income exceeds entry income, among exits with both incomes recorded and valid.
6-month follow-up completion rate	followup_6_month_completion_rate
Assessment completion rate	Enrollments with a completed required assessment, as a percentage of all enrollments.
Exit plan completion rate	Exits with a completed exit plan, as a percentage of all exits.
3-Month Follow-Up completion rate	Completed 3-month follow-ups as a percentage of clients whose 3-month follow-up has come due.
6-Month Follow-Up completion rate	Completed 6-month follow-ups as a percentage of clients whose 6-month follow-up has come due.
Annual Follow-Up completion rate	Completed annual follow-ups as a percentage of clients whose annual follow-up has come due.
